WILLIAM B. FREEDMAN
JOSEPH GETTLER JR. INVENTORS

It is a general object of our invention to provide new and improved methods or constructions useful in the fabrication of so-called "pop-up" books. To that end, it contemplates particularly a new and improved way of fabricating said blanks and said books by the use of a multiple folded page construction which facilitates rapid and economical quantity production due to the structural simplicity and ease of assembly of said blank and book.

— William B. Freedman & Joseph Gettler, Jr., of New York State, 1951
